

The Rules for Energy Liability - Brochure

We protect upstream and downstream businesses against liability for damage to third parties caused by a wide range of activities - from seismic surveys, drilling and construction to power generation, electricity transmission, oil pipeline transportation and refining.

COVERAGE

Our coverages are tailored to the variety of risks energy companies face at all phases of the process, from exploration through to production. We offer protection for onshore and offshore energy risks, either separately or as a combined offering on a:

Primary or excess basis

Claims-made or occurrence basis

CLIENT PROFILES

In the upstream sector, our clients conduct seismic surveys to find resources, drill oil and gas wells and construct production infrastructure.

In the midstream sector, our clients own or operate oil and gas pipelines and/or storage facilities, as well as transmission and distribution infrastructure.

In the downstream sector, our clients own or operate power plants, energy utilities, refineries and petrochemical plants.

Our clients also include contractors working in any/all of these sectors including those engaged in dismantling and removing property that has reached the end of its useful life.

Our clients range from sole traders operating from a single site to leading national/multinational companies operating worldwide.
